Written Report Received:

Clean Up Concluded:

Risk Evaluation:

their where cattle in pasture but we had hydro- vac and crew out their washing and sucking up contaminated area within an 1 hour after the incident

Areal Extent:

Potential Environmental Impacts:

The scoria around well head and a 10 by 10 grass area on location, were indicative of a reclamation not looking to exceed the 3.5 cubic/yards on the pad, and an additional 15 cu./yds. was collected on the natural erosion area coming away from the pad, and any additional seepage perceived to be

Action Taken or Planned:

Shut well down replaced stuffing box rubbers turn down the Murphy Switch kill tore apart Baird back pressure valve to check for paraffin and scale that might have gotten plugged up in the valve and caused over pressuring of flow line witch we did find some in it. An earthen berm was created on North and West side as a precautionary measure. An increased amount of intervals are planned by the pumper, as simply a precautionary move, to act as visual vigilance to see that the repairs made have the lasting effect intended.

Wastes Disposal Location: Renewable Resources Killdeer N.D (An approved vendor with the Sate Of North Dakota).
